[springer.com](http://springer.com) [Occupational exposure to electromagnetic fields in relation to leukemia](#) and brain tumors: a case-control study in Sweden. Occupational exposure to low-frequency electromagnetic fields (EMF) was studied in 250 leukemia patients and 261 brain-tumor cases, diagnosed in 1983–87 and compared with a control group of 1,121 randomly selected men, from the mid-region of Sweden, 1983–87. We based the exposure assessment on measurements from 1,015 different workplaces. On the basis of the job held longest during the 10-year period before diagnosis, we found an association between the average, daily, mean level of EMF and chronic lymphocytic leukemia (CLL). The risk increased with increasing level of exposure. Pub 15 June 1993 Added 23 Aug 2018

[altermedicine.org](http://altermedicine.org) [EMF Home inspection in Sweden – We offer professional EMF inspection all over Sweden. We can analyze low-frequency fields, high-frequency fields, gamma radiation, lay lines.](#) The whole inspection takes around 2 hours. During the inspection we take pictures and later on we add sources of radiation, which we include in our reports. Added 23 Aug 2018

Molecular and Clinical Oncology [High radiofrequency radiation at Stockholm Old Town:](#) An exposimeter study including the

Royal Castle, Supreme Court, three major squares and the Swedish Parliament. Exposure to radiofrequency (RF) radiation was classified as a possible human carcinogen, Group 2B, by the International Agency for Research on Cancer at WHO in 2011. ....

Pub Apr 2017 Added 23 Aug 2018

Pubmed – Radiofrequency radiation from nearby base stations gives high levels in an apartment in Stockholm, Sweden: A case report. Exposure to radiofrequency (RF) radiation was classified in 2011 as a possible human carcinogen, Group 2B, by the International Agency for Research on Cancer of the World Health Organisation. Evidence of the risk of cancer risk has since strengthened. Exposure is changing due to the rapid development of technology resulting in increased ambient radiation. RF radiation of sufficient intensity heats tissues, but the energy is insufficient to cause ionization, hence it is called non-ionizing radiation. These non-thermal exposure levels have resulted in biological effects in humans, animals and cells, including an increased cancer risk Pub May 2018

Added 23 Aug 2018

Pubmed – Recent advances in the effects of microwave radiation on brains. This study concerns the effects of microwave on health because they pervade diverse fields of our lives. The brain has been recognized as one of the organs that is most vulnerable to microwave radiation. Therefore, in this article, we reviewed recent studies that have explored the effects of microwave radiation on the brain, especially the hippocampus, including analyses of epidemiology, morphology, electroencephalograms, learning and memory abilities and the mechanisms underlying brain dysfunction. Pub 21 Sept 2017

Added 23 Aug 2018

Pubmed – Microwave frequency electromagnetic fields (EMFs) produce widespread neuropsychiatric effects including depression. Non-thermal microwave/lower frequency electromagnetic fields (EMFs) act via voltage-gated calcium

channel (VGCC) activation. Calcium channel blockers block EMF effects and several types of additional evidence confirm this mechanism. Low intensity microwave EMFs have been proposed to produce neuropsychiatric effects, sometimes called microwave syndrome, and the focus of this review is whether these are indeed well documented and consistent with the known mechanism(s) of action of such EMFs. VGCCs occur in very high densities throughout the nervous system and have near universal roles in release of neurotransmitters and neuroendocrine hormones. Pub Sept 2016 Added 23 Aug 2018

PS many more technical articles and abstracts available from pubmed. Ed.

Prof. Olle Johansson

[NewsVoice.se](#) Associate Professor Olle Johansson: [Wireless radiation – the biggest full-scale biomedical experiment ever done on Earth....](#) Already today, an excess of 25,000 Europeans die prematurely in Europe, and SVT News pointed out that by 2050 the corresponding annual premature deaths worldwide will amount to approx. 10,000,000 people (other animal species not included). **As a scientist**, formerly employed at the Karolinska Institute (KI) and the Royal Institute of Technology (Kungl Tekniska Högskolan; KTH), I have to point out that these figures may be too low.
